

27.3 Gas Immersion Laser Doping (GILD)	
– Michael O. Thompson, T. W. Sigmon and Patrick M. Smith	700
27.3.1 Theory of Operation	700
27.3.2 GILD Equipment and Sample Preparation	701
27.3.3 Laser Sources	701
27.3.4 Gas Sources	702
27.3.5 Process Monitoring and Calibration	702
27.3.6 Doping Profiles	703
27.3.7 Wafer Throughput	704

Table of Contents

21.5 Deep Ultraviolet Laser Photolithography			
– Timothy A. Brunner	629		
21.5.1 Overview	629		
21.5.2 High Resolution Lithography	630		
21.5.3 Deep Ultraviolet Lithography Issues	632		
Chapter 22 Flat Panel Display	635		
22.0 Introduction	635		
22.1 Repair – Floyd R. Pothoven	635		
22.1.1 Short Removal	635		
22.1.2 Open Repair	636		
22.2 Marking – Floyd R. Pothoven	638		
22.3 Laser Patterning Indium Tin Oxide Coated Flat Panel Displays – Rodney Waters and Terry Pothoven	637		
22.3.1 Nature of Indium Tin Oxide	637		
22.3.2 Maskless Pattern Generation	637		
22.3.3 Laser Choices	637		
22.3.4 Laser Cutting	638		
22.4 Annealing of Thin-Film Transistors – Heinrich Endert and Dirk Basting	638		
Chapter 23 High-Temperature Superconductors	641		
23.0 Introduction	641		
23.1 Procedures – S. P. Pai, R. D. Vispute and T. Venkatesan	641		
23.1.1 Targets and Ablation	641		
23.1.2 Appropriate Lasers and Systems	642		
23.1.3 Film Growth	642		
23.2 Results of HTSC Deposition – Quanxi Jia	644		
23.2.1 Characterization	644		
23.2.2 Comparison with Other Techniques	646		
23.3 Laser Treatment of HTSC Films – Emil N. Sobol	647		
23.3.1 Modification	648		
23.3.2 Polishing of Thin HTSC Films	650		
Chapter 24 Laser Produced Microstructures	651		
24.1 Basic Laser Microstructuring Procedures – J. J. Dubowski	651		
24.1.0 Introduction	651		
24.1.1 Microstructuring by Laser Direct Ablation	651		
24.1.2 Microstructuring by Laser Etching	652		
24.2 Other Methods of Laser Microstructuring – J. J. Dubowski	655		
24.2.1 Laser-LIGA Processing	655		
24.2.2 Laser Microstructuring of Glass	655		
24.2.3 Laser Microstructuring of Semiconductors	657		
Chapter 25 Electronic Packaging: Electrical Interconnects	661		
25.0 Introduction	661		
25.1 Via Drilling – Mark D. Owen	661		
25.1.1 Lasers for Via Drilling	661		
25.1.2 Optical Configurations	662		
25.1.3 Applications and Results	663		
25.2 Bonding/Soldering	665		
25.2.1 Laser Tape Automated Bonding (TAB) – James Hayward	665		
25.2.2 Laser Reflow Soldering – Gary M. Freedman	667		
25.3 Wirestripping	672		
25.3.0 Introduction	672		
25.3.1 Important Parameters in Laser Wirestripping – James H. Brannon and Andrew C. Tam	672		
25.3.2 Lasers for Wirestripping – James H. Brannon and Andrew C. Tam	673		
25.3.3 Wirestripping Procedures – Ronald D. Schaeffer	675		
Chapter 26 Electronic Packaging: Package Sealing and Ceramic Processing	677		
26.0 Introduction	677		
26.1 Package Welding – Phillip W. Fuerschbach	677		
26.1.1 General Considerations	677		
26.1.2 Weld Schedule Development	679		
26.1.3 Process Monitoring	682		
26.2 Cutting and Scribing of Substrates – William H. Shiner and Steven R. Maynard	684		
26.2.0 Introduction	684		
26.2.1 Laser Selection	684		
26.2.2 Process Parameters	684		
26.2.3 Pulse Parameters	685		
26.2.4 Optical Considerations	686		
26.2.5 Assist Gas and Nozzle Configuration	686		
26.2.6 Hardware Considerations	687		
26.2.7 Comparison of Scribing and Cutting	687		
26.2.8 Laser Scribing Results – John F. Ready	687		
26.3 Hole Drilling in Ceramics	688		
26.3.0 Introduction	688		
26.3.1 Advantages and Laser Choice – Ronald D. Schaeffer	688		
26.3.2 Procedures and Results – William H. Shiner and Steven R. Maynard	689		
Chapter 27 Film Deposition and Doping	691		
27.1 Thin Film Deposition – Ying Tsui	691		
27.1.1 Laser Chemical Vapor Deposition	691		
27.1.2 Coatings made by LCVD	693		
27.1.3 Direct Write Processing using LCVD	694		
27.1.4 Pulsed Laser Deposition	695		
27.2 Deposition of Thick Films of Electronic Ceramics – D. B. Chrisey, J. S. Horwitz, P. C. Dorsey and L. A. Knauss	697		

16.5.1	Material Properties	568	19.1.8	Energy Coupling – Donald V. Smart	599
16.5.2	Machine Variables	570	19.1.9	Link Materials – Donald V. Smart	600
16.6	Coating of Rapid Tools by Pulsed Laser Deposition – Larry R. Dosser	572	19.1.10	Link Design – Donald V. Smart	600
16.7	Adaptation of RP Technology to the Manufacture of Die Casting Tools – Peter J. Hardro	573	19.1.11	Link Groups – Donald V. Smart	601
16.8	Table: Comparison of Rapid Prototyping Systems – Peter J. Hardro	577	19.1.12	Accuracy – Donald V. Smart	602
			19.1.13	Alignment Strategy – Donald V. Smart	604
Chapter 17	Trimming	583	19.2	Redundancy for Memory Yield Enhancement	604
17.0	Introduction	583	19.2.0	Introduction	604
17.1	Basics of Laser Trimming – Rodger Dwight	583	19.2.1	Development of Redundancy – Edward J. Swenson	604
17.1.1	Physical Processes – Rodger Dwight	583	19.2.2	Laser Choice – Edward J. Swenson	605
17.1.2	Overview of a Laser Trimming System – Rodger Dwight	585	19.2.3	Hardware Description – Edward J. Swenson	606
17.1.3	Types of Laser Trims – Rodger Dwight	585	19.2.4	Absorptivity Considerations – Edward J. Swenson	606
17.1.4	Appropriate Lasers – Rodger Dwight	585	19.2.5	Spot Size Consideration – James A. Dumestre	607
17.2	Trimming Techniques – Philip DeLuca	586	19.3	Link Making – Joseph B. Bernstein and Wei Zhang	608
17.2.1	Thick-Film Trimming – Philip DeLuca	586	19.3.0	Introduction	608
17.2.2	Thin Film on Ceramic Laser Trimming – Philip DeLuca	587	19.3.1	Earlier Work	609
17.2.3	Chip Resistor Laser Trimming – Philip DeLuca	587	19.3.2	Principles	609
17.2.4	Thin Film on Silicon Resistor Trimming – Philip DeLuca	587	19.3.3	Reliability	611
17.2.5	Interference Effects – Yunlong Sun	587	19.3.4	Implementation	612
			19.3.5	Laser Energy	613
Chapter 18	Laser Marking/Branding	589	19.3.6	Summary	613
18.0	Introduction	589	19.4	Personalization – Meir Janai	614
18.1	Package Marking and Branding – Donald V. Smart and Jose Downes	589	19.4.1	Definitions and Basic Terms	614
18.1.1	Laser Marking in Production	589	19.4.2	Personalization by Link Cutting – Choice of Laser	614
18.1.2	The Marking Process	589	19.4.3	The Personalization Process	614
18.1.3	Mark Quality Criteria	590	Chapter 20	Repair	617
18.2	Wafer Serialization – Jim Scaroni, Jerry Becker and Terry McKee	590	20.1	Repair Needs – Thomas A. Wassick	617
18.2.1	Techniques	590	20.2	Substrate Repair – Thomas A. Wassick	617
18.2.2	Results	591	20.2.1	Repair of Shorts	617
18.3	Marking of Electronic Components – Terry McKee	592	20.2.2	Repair of Opens	618
			20.3	Laser-Based Photomask Repair – John F. Ready	621
Chapter 19	Link Cutting/Making	595	Chapter 21	Applications in Photolithography	623
19.1	Basics of Link Processing with Lasers	595	21.1	Overview – J. J. Dubowski	623
19.1.0	Introduction – Donald V. Smart	595	21.2	Laser Sources for Microlithography Exposure Tools – Toshihiko Ishihara	623
19.1.1	Basics of Link Cutting – John F. Ready	595	21.2.1	Excimer Lasers – Toshihiko Ishihara	625
19.1.2	Memory Repair Goals – Donald V. Smart	595	21.2.2	Diode Pumped Harmonic Nd:YAG Lasers – Roy D. Mead	626
19.1.3	Processing Concerns – Donald V. Smart	596	21.3	Advantages of Laser Microlithography Compared to Other Sources – John J. Shamaly	628
19.1.4	Lasers for Link Cutting – Donald V. Smart	597	21.4	Laser-Based Photolithography System Issues – John J. Shamaly	629
19.1.5	Positioning Systems – Donald V. Smart	598			
19.1.6	Optics – Donald V. Smart	598			
19.1.7	Pulse Control – Donald V. Smart	599			

Table of Contents

13.4 Aerospace Applications – Robert T. Brown	496	15.4 Beam Motion Systems	532
13.4.1 Hole Requirements	496	15.5 Masking	532
13.4.2 Laser Type	496	15.5.6 Engraving Recommendations	533
13.4.3 Typical Focus-Head Arrangement	497	15.6 Image Micromachining – Brian Norris	534
13.4.4 Percussion Drilling	497	15.6.1 Techniques	534
13.4.5 Trepan Drilling	498	15.6.2 Results	534
13.5 Ultrashort-Pulse Laser Machining – M. D. Perry, B. C. Stuart, P. S. Banks, M. D. Feit, and J. A. Sefcik	499	15.7 Applications – Terry McKee	535
13.5.0 Introduction	499	15.7.1 CO ₂ Lasers – Terry McKee	535
13.5.1 Dielectrics	499	15.7.2 Nd:YAG Lasers – Terry McKee	535
13.5.2 Metals	503	15.7.3 Excimer Lasers – Heinrich Endert and Dirk Basting	536
13.6 Comparison With Other Technologies – Todd J. Rockstroh	508	15.8 Comparison with Other Techniques – Terry McKee	537
13.6.1 Consideration of Quantity of Holes Drilled	508	Chapter 16 Rapid Prototyping	541
13.6.2 Large Diameter Holes > 0.025 mm (0.001 in.)	509	16.0 Introduction and Glossary – Terry Feeley and Paul F. Jacobs	541
13.6.3 Small Diameter Holes < 0.025 mm (0.001 in.)	510	16.1 Basics of Laser-Based Rapid Prototyping – Allan Lightman	542
13.6.4 Laser Costs and Other Factors	511	16.1.1 Rapid Prototyping: An Overview	542
13.6.5 Summary	512	16.1.2 Lasers Parameters for RP	542
Chapter 14 Balancing	513	16.1.3 Scanning Exposure Factors	543
14.1 Basics of Balancing – Hatto Schneider	513	16.1.4 Small Spot Systems	544
14.1.0 Introduction	513	16.2 Stereolithography	545
14.1.1 Conditions for Balancing	513	16.2.1 The Stereolithography Process – Paul F. Jacobs	545
14.1.2 Balancing Procedures	514	16.2.2 Materials for Stereolithography – Stephen D. Hanna	548
14.1.3 Balancing Process	514	16.2.3 Lasers for Stereolithography – Kenneth G. Ibbs	550
14.1.4 Example: A Typical Balancing Task	515	16.2.4 Stereolithography in Product Development – Thomas J. Mueller	552
14.2 Laser Balancing Procedures – Michael Martin	515	16.3 Selective Laser Sintering	554
14.2.0 Introduction	515	16.3.1 The Selective Laser Sintering Process – Brent Stucker	554
14.2.1 Advantages/Limitations of Laser Balancing	516	16.3.2 Materials for SLS – Sundar V. Atre and Randall M. German	556
14.2.2 Balancing Systems	516	16.3.3 Lasers for Selective Laser Sintering – Damien F. Gray	557
14.3 Some Applications of Laser Balancing – Hatto Schneider	518	16.3.4 Directed Light Fabrication – Gary K. Lewis	559
14.3.1 Timing Wheel Balancing	518	16.3.5 The Laser Engineered Net Shaping Process – David M. Keicher	561
14.3.2 Clutch Disk Balancing	519	16.3.6 Results – Kevin P. McAlea	563
14.3.3 Frequency Spindle Balancing	519	16.4 Laminated Object Manufacturing	564
14.3.4 Other Applications	520	16.4.1 The LOM Process – Sung S. Pak	564
Chapter 15 Marking	521	16.4.2 Applications – Sung S. Pak	565
15.1 Basic Principles – Terry McKee	521	16.4.3 Laser Cutting-Based Rapid Prototyping Options for Metal and Ceramic Components – Curtis W. Griffin and Alair Griffin	566
15.2 Materials – Terry McKee	522	16.5 CAM-LEM Processing of Ceramic and Metal Parts – James D. Cawley	567
15.3 Appropriate Lasers	525	16.5.0 Introduction	567
15.3.1 CO ₂ Lasers – Robert K. Brimacombe	525		
15.3.2 NdYAG Lasers – Martin Matthews	527		
15.3.3 Excimer Lasers for Marking – Heinrich Endert and Dirk Basting	528		
15.4 Dot Matrix Marking – Andrew John Chambers	529		
15.4.1 Techniques	529		
15.4.2 Results	530		
15.5 Engraving – Peter Becher, Phil DeBoer and Arlene Zdrazil	530		
15.5.1 Techniques	530		
15.5.2 Lasers	531		
15.5.3 Surface Effects	532		

11.4.11	Laser-Welded Tailored Blanks – Dave F. Farson	414	12.3.2	CO ₂ Laser Cutting – Volodymyr S. Kovalenko	456
11.4.12	Automotive Applications – Andreas Gebhardt	417	12.3.3	Cutting of Nonmetals with Nd:YAG Lasers – John Powell	459
11.5	Comparison of Laser Welding to Other Welding Technologies	418		Nd:YAG Laser Cutting Data – Volodymyr S. Kovalenko	460
11.5.1	Alternate Welding Technologies – Geoff J. Shannon	418	12.3.4	Cutting Jewelry Materials – David M. Marusa	462
11.5.2	Key Aspects of Comparison – Geoff J. Shannon	421	12.4	Costs of Laser Cutting	463
11.5.3	Laser Welding Comparisons – Dan Gnanamuthu	423	12.4.1	Conventional CO ₂ Laser Cutting System – David Havrilla	463
11.5.4	Comparison of Welding Technology Results – David Havrilla	423	12.4.2	Conventional Nd:YAG Laser Cutting System – David Havrilla	463
Chapter 12	Laser Cutting	425	12.5	Comparison of Laser Cutting with Other Technologies	464
12.1	Basic Description of Laser Cutting	425	12.5.1	Advantages and Drawbacks of Laser Cutting – David Havrilla	464
12.1.1	Cutting Processes – Dirk Petring	425	12.5.2	Comparison of CO ₂ Laser Cutting with Other Profiling Techniques – John Powell	464
12.1.2	Power Balance – Dirk Petring	428	12.5.3	Advantages and Limitation of Laser Cutting of Nonmetals – Volodymyr S. Kovalenko	470
12.1.3	Appropriate Lasers – Dirk Petring	431	Chapter 13	Hole Drilling	471
12.1.4	Gas Assist Techniques – Dirk Petring	431	13.1	Basic Description of Laser Drilling	471
12.1.5	Cutting of Complex Shapes – Dirk Petring	432	13.1.1	Surface Reflectivity – Xiangli Chen	471
12.1.6	Post-Cutting Operations – Dirk Petring	433	13.1.2	Thermal Properties – Xiangli Chen	472
12.1.7	Polarization Effects in Laser Cutting: Basics – Flemming O. Olsen	433	13.1.3	Physical Processes: Melting, Vaporization, Flushing, Percussion – Xiangli Chen	473
12.1.8	Control of Beam Polarization Effects in Cutting – John Powell	436	13.1.4	Appropriate Lasers: Power/Irradiance, Pulse Duration – Xiangli Chen	473
12.2	Laser Cutting of Metals	437	13.1.5	Percussion Drilling and Trepanning – Dana Elza and Steven R. Maynard	474
12.2.1	The Metal Cutting Process – Leonard Migliore	437	13.2	Drilling of Metals	474
12.2.2	Characteristics of Laser-Cut Edges – Leonard Migliore	438	13.2.0	Introduction	474
12.2.3	Laser Cutting of Specific Metals – Leonard Migliore	439	13.2.1	Nd:YAG Laser Drilling – Hansjoerg Rohde	475
12.2.4	CO ₂ Laser Cutting of Metals – John Powell	439	13.2.2	CO ₂ Lasers for Metal Drilling – Marshall G. Jones	479
12.2.5	Nd:YAG Laser Cutting – John Powell Thickness Versus Cutting Speed – David Havrilla	446	13.2.3	CO ₂ Laser Drilling – Hansoerg Rohde	479
12.2.6	Microcutting of Metals with Pulsed Nd:YAG Lasers – Hansjoerg Rohde	448	13.2.4	Drilling with Copper Vapor Lasers – Roland Mayerhofer and Hans Wilhelm Bergmann	479
12.2.7	Cutting of Metals with Other Lasers Cutting with a CO Laser – Tomoo Fujioka	450	13.2.5	Applications of Copper Vapor Laser Drilling – Richard Slagle	483
	Cutting with a Chemical Oxygen-Iodine Laser – William P. Latham and Aravinda Kar	453	13.3	Drilling of Nonmetals	484
	Cutting with Photolytic Iodine Lasers – Philip R. Cunningham and L. A. (Vern) Schlie	453	13.3.1	General Considerations – Dana Elza and Steven R. Maynard	484
12.3	Laser Cutting of Nonmetals	456	13.3.2	Nd:YAG Laser Drilling – Suwas Nikumb	484
12.3.1	Cutting Mechanisms and Cut Quality – John Powell	456	13.3.3	CO ₂ Laser Drilling – Dana Elza and Steven R. Maynard	490
			13.3.4	Excimer Laser Drilling – Heinrich Endert and Dirk Basting	491
			13.3.5	Copper Vapor Laser Drilling – Roland Mayerhofer and Hans Wilhelm Bergmann	494

Table of Contents

10.2.5	Joint Design: Configurations and Tolerances – Dave F. Farson	318	11.2.3	Focus Position	367
10.2.6	Joint Design: Choice – Thomas R. Kugler	320	11.2.4	Surface Conditions	368
10.2.7	Elements of Quality – Thomas R. Kugler	320	11.2.5	Joint Design	368
10.2.8	Processing Gases – Joachim Berkmanns	322	11.2.6	Edge Preparation	369
10.2.9	Guidelines – Dave F. Farson	325	11.2.7	Fixturing	369
10.3	Laser Welding Results	325	11.2.8	Shielding and Plasma Control	370
10.3.1	Nd:YAG Laser Welding – George Chryssolouris and Stefanos Karagiannis	325	11.2.9	Preheating	372
10.3.2	Nd:YAG Laser Welding Guidelines – David Havrilla	334	11.2.10	Splatter Control	372
10.3.3	Nd:YAG Laser CW Seam Welding of Common Materials – Dale U. Chang	338	11.2.11	Process Monitoring Systems	373
10.3.4	Nd:YAG Pulsed-Seam Welding – Thomas R. Kugler	339	11.2.12	Post Treatment	373
10.3.5	Spot Welding with Pulsed Nd:YAG Lasers – Hansjoerg Rohde	342	11.2.13	Filler Material Considerations	374
10.3.6	Microjoining with Nd:YAG Lasers – Joseph J. Kwiatkowski	344	11.3	Welding Data Summary	375
10.3.7	Conduction Welding with CO ₂ Lasers – John F. Ready	347	11.3.1	High-Power Laser Welding of Common Materials – Keng H. Leong and Paul G. Sanders	375
10.3.8	Welding with Low Power CO ₂ Lasers – John F. Ready	348	11.3.2	CO ₂ Laser CW Seam Welding of Common Materials; Conditions for Penetration Welding – Robert J. Steele	379
10.3.9	Welding with Diode Lasers – Bodo Ehlers	348	11.3.3	CW CO ₂ Laser Welding of Common Materials – E. A. Metzbower	381
10.3.10	Welding with Photolytic Iodine Lasers (PILS) – Philip R. Cunningham and L. A. (Vern) Schlie	351	11.3.4	Pulsed CO ₂ Laser Welding of Common Metals – Chris Rickert	383
10.4	Materials Issues	352	11.3.5	Nd:YAG CW Welding of Common Materials – C. L. M. Ireland	383
10.4.1	Tabulation of Materials and Weldability – R. F. Duhamel	352	11.3.6	Nd:YAG Laser-Pulsed Welding of Common Materials – David C. Weckman and Hugh W. Kerr	387
10.4.2	Welding of Dissimilar Materials – Kevin J. Ely	354	11.3.7	Comparison of Penetration Welding with Nd:YAG and CO ₂ Lasers – David Havrilla	399
10.5	Comparison of Laser Welding with Other Technologies	357	11.3.8	Laser Welding with Filler Wire – Andreas Gebhardt	400
10.5.1	Advantages/Limitations – Vivian E. Merchant	357	11.3.9	Welding with Other Lasers – Sunichi Sato	404
10.5.2	Economic Considerations – Vivian E. Merchant	358	11.3.10	Operating Costs for Penetration Welding – David Havrilla	407
10.5.3	Comparison of Welding Results – George Chryssolouris and Stefanos Karagiannis	359	11.4	Industrial Applications of High-Power Laser Welding	409
Chapter 11	Penetration Welding	361	11.4.1	Introduction – Geoff J. Shannon	409
11.0	Introduction – John F. Ready	361	11.4.2	Key Aspects – Geoff J. Shannon	409
11.1	Description of Penetration Welding	361	11.4.3	Welding Thin Sheet Material (< 0.5 mm) – Geoff J. Shannon	411
11.1.1	The Deep Penetration Process – Dan Gnanamuthu	361	11.4.4	Sheet Material (1–3 mm) – Geoff J. Shannon	411
11.1.2	Motion of the Keyhole – John F. Ready	363	11.4.5	Welding Plate Material (4–12 mm) – Geoff J. Shannon	412
11.1.3	Penetration – John F. Ready	363	11.4.6	Weld Tolerances – Geoff J. Shannon	412
11.1.4	Lasers for Penetration Welding – John F. Ready	364	11.4.7	Hybrid Welding – Geoff J. Shannon	413
11.1.5	Melting Efficiency – John F. Ready	364	11.4.8	Weld Testing – Geoff J. Shannon	413
11.2	Welding Procedures – Conrad M. Banas	365	11.4.9	Plastic Welding – Geoff J. Shannon	413
11.2.1	Laser Choice	365	11.4.10	Material Welding Summary – Geoff J. Shannon	414
11.2.2	Optics	366			

7.5.4	Residual Deformation – Leonid F. Golovko	255
7.5.5	Mechanical Characteristics – Leonid F. Golovko	256
7.5.6	Heat Resistance – Leonid F. Golovko	257
7.5.7	Corrosion Resistance – Leonid F. Golovko	257
7.5.8	Wear Resistance – Vivian E. Merchant	258
7.6	Applications of Heat Treating	258
7.6.1	Steering Gear Assemblies – David A. Belforte	258
7.6.2	Diesel Engine Cylinder Liners – David A. Belforte	259
7.6.3	Turbine Blade Hardening – John F. Ready	260
7.7	Comparison with Other Technologies – Vivian E. Merchant	260
7.7.1	Advantages/Disadvantages	260
7.7.2	Economic Considerations	261
Chapter 8	Surface Treatment: Glazing, Remelting, Alloying, Cladding, and Cleaning	263
8.0	Introduction – John F. Ready	263
8.1	Rapid Melting	263
8.1.1	Melting Kinetics – John F. Ready	263
8.1.2	Absorption Mechanism – Menachem Bamberger	264
8.1.3	Effects of Convection – Menachem Bamberger	264
8.1.4	Temperature Distribution in the Melt – Menachem Bamberger	266
8.2	Rapid Solidification and Microstructure – Menachem Bamberger	268
8.2.1	Solidification	268
8.2.2	Temperature Distribution During Cooling	269
8.2.3	Dendrite Spacing	269
8.3	Appropriate Lasers and Optics – Walter J. Spawr	271
8.3.1	Nd:YAG Lasers	271
8.3.2	CO ₂ Lasers	271
8.4	Laser Glazing	271
8.4.1	The Glazing Process – Vivian E. Merchant	271
8.4.2	Rapid Cooling – John F. Ready	272
8.5	Surface Remelting	273
8.5.1	Surface Remelting of Bearings – Dennis W. Hetzner	273
8.5.2	Melting Cast-Iron Surfaces – Menachem Bamberger	276
8.6	Surface Alloying	279
8.6.1	Basics of Laser Alloying– John F. Ready	279
8.6.2	Materials Deposition Techniques – Volodymyr S. Kovalenko	279
8.6.3	Mixing Characteristics – Volodymyr S. Kovalenko	281
8.6.4	Enhanced Surface Properties – Volodymyr S. Kovalenko	283

8.7	Surface Cladding – Thomas Aaboe Jensen	284
8.7.0	Introduction	284
8.7.1	Cladding Techniques	284
8.7.2	Feeding Principles	285
8.7.3	Process Characteristics	285
8.7.4	Cladding Characteristics	286
8.7.5	Cladding Materials	286
8.7.6	Process Benefits	286
8.7.7	Process Drawbacks	287
8.7.8	Applications	287
8.7.9	Special Applications	287
8.8	Cleaning	287
8.8.0	Introduction – Martin C. Edelson	287
8.8.1	Surface Cleanings – Martin C. Edelson	287
8.8.2	Contaminant Removal – Mary Helen McCay	289
8.8.3	Removal of Paint, Dielectric and Other Coatings – Alan E. Hill	293
8.9	Disk Texturing – Ronald D. Schaeffer	297
Chapter 9	Brazing/Soldering	299
9.1	Process Definition – E. Schubert, I. Zerner and G. Sepold	299
9.2	Appropriate Lasers – E. Schubert, I. Zerner and G. Sepold	299
9.3	Beam Manipulation Techniques – E. Schubert, I. Zerner and G. Sepold	300
9.4	Applications and Results – E. Schubert, I. Zerner and G. Sepold	301
9.4.1	Brazing of Steel – E. Schubert, I. Zerner and G. Sepold	301
9.4.2	Brazing of Titanium – E. Schubert, I. Zerner and G. Sepold	302
9.4.3	Joining Of Dissimilar Materials – E. Schubert, I. Zerner and G. Sepold	302
9.4.4	Soldering Applications with Diode Lasers – Bodo Ehlers	303
Chapter 10	Conduction Welding	307
10.0	Introduction – John F. Ready	307
10.1	Basic Description of Laser Welding	307
10.1.1	Use of Laser Welding – George Chryssoulouris and Stefanos Karagiannis	307
10.1.2	Metal Reflectivity – Thomas R. Kugler	308
10.1.3	Thermal Properties of Metals – Thomas R. Kugler	309
10.1.4	Fusion Front Penetration – Thomas R. Kugler	310
10.1.5	Thermal Conduction Limitations – Thomas R. Kugler	313
10.2	Welding Procedures	314
10.2.1	Laser Characteristics – Thomas R. Kugler	314
10.2.2	Optics – Thomas R. Kugler	316
10.2.3	Focus Position – Thomas R. Kugler	317
10.2.4	Surface Conditions – Thomas R. Kugler	318

Table of Contents

5.3	Reflectivity and Absorptivity of Opaque Surfaces – Michael F. Modest	175	6.4	Nonbeam Hazards – LIA Nonbeam Hazard Subcommittee with Additions by C. Eugene Moss	214
5.3.1	Definitions	175	6.4.1	Types of Nonbeam Hazards	214
5.3.2	Predictions from Electromagnetic Wave Theory	176	6.4.2	Laser-Generated Chemical Hazards	214
5.3.3	Reflectivities of Metals	176	6.4.3	Physical Hazards	216
5.3.4	Reflectivities in Nonconductors	178	6.4.4	Personnel Protective Equipment	217
5.3.5	Polarization Effects	180	6.4.5	Biological/Medical Hazards	218
5.3.6	Effects of Surface Conditions	180	6.5	Laser Safety Standards – Robert Weiner	218
5.3.7	Summary	181	6.5.1	Terms and Abbreviations	218
5.4	Absorption of Laser Radiation	182	6.5.2	United States Standards	219
5.4.1	Absorption Coefficients – Michael F. Modest	182	6.5.3	International Standards	219
5.4.2	Semitransparent Sheets – Michael F. Modest	183	6.5.4	European and Other Nations' Standards and Directives	220
5.4.3	Variation During Irradiation – John F. Ready	183	6.5.5	Sources	220
5.5	Energy Transport in Laser-Irradiated Materials – P. S. Mohanty and Jyoti Mazumder	184	Chapter 7	Surface Treatment: Heat Treatment	223
5.5.0	Introduction	184	7.0	Introduction	223
5.5.1	Parameters	189	7.1	Principles of Transformation Hardening – Charles E. Albright	223
5.5.2	Heat Balance	189	7.2	Laser and Optics For Heat Treating	224
5.5.3	Conduction	190	7.2.1	Lasers – Wolfgang Bloehs	224
5.5.4	Convection	194	7.2.2	Optics – Wolfgang Bloehs	227
5.5.5	Vaporization	195	7.2.3	Optics For Uniform Beam Profiles – Charles E. Albright	231
5.5.6	Mass Diffusion	197	7.3	Results of Laser Heat Treatment	232
5.5.7	Specific Examples	198	7.3.0	Introduction – Karthik Nagarathnam and Jyoti Mazumder	232
5.6	Phase Changes – Vladimir Semak	200	7.3.1	Irradiance versus Interaction Time – Karthik Nagarathnam and Jyoti Mazumder	232
5.7	Plasma Shielding – J. Thomas Schriempf	202	7.3.2	Summary of Laser Heat Treatment Data – Karthik Nagarathnam and Jyoti Mazumder	233
5.7.0	Introduction	202	7.3.3	Effect of Process Variables – Karthik Nagarathnam and Jyoti Mazumder	233
5.7.1	Atmospheric Breakdown	202	7.3.4	Residual Stresses in Laser Heat Treatment – Karthik Nagarathnam and Jyoti Mazumder	238
5.7.2	Laser-Supported Absorption Waves	202	7.3.5	Laser Heat Treatment Hardness Data – Karthik Nagarathnam and Jyoti Mazumder	239
5.7.3	Consequences of Plasma Shielding	203	7.3.6	Surface Hardening with Diode Lasers – Bodo Ehlers	241
5.8	Regimes of Irradiance and Interaction Time – John F. Ready	204	7.4	Materials and Testing – Klaus Müller and Hans Wilhelm Bergmann	243
Chapter 6	Hazards and Safety Considerations	205	7.4.1	Alloy Effects	243
6.0	Introduction	205	7.4.2	Surface Condition	249
6.1	Health Hazards and Personnel Safety – Terry L. Lyon, Rodney L. Wood and David H. Sliney	205	7.5	Surface Properties	249
6.1.1	Specific Biological Effects	205	7.5.0	Introduction – Leonid F. Golovko	249
6.1.2	Hazard Classification: Classes of Lasers	206	7.5.1	Chemical Composition – Leonid F. Golovko	249
6.1.3	Safety Measures	207	7.5.2	Hardness and Its Distribution Along the Surface – Leonid F. Golovko	251
6.2	Safety with Industrial Lasers – Terry L. Lyon, Rodney L. Wood, and David H. Sliney	208	7.5.3	Residual Stresses – Leonid F. Golovko	252
6.2.1	Industrial Laser Systems	208			
6.2.2	Workplace Surveillance	208			
6.3	Specific Systems and Applications	211			
6.3.1	Portable Laser Welders – An Example – Terry L. Lyon, Rodney L. Wood and David H. Sliney	211			
6.3.2	Beam Alignment Hazards – Marius Jurca	212			

	and Aravinda Kar	93	4.5.3	Power Meters – Francis Audet	147
3.1.4	Brightness – William P. Latham and Aravinda Kar	94	4.5.4	Optimizing Meters – Francis Audet	148
3.1.5	Stable Resonator Modes – James T. Luxon	95	4.5.5	Positioning of Power Monitors – Marius Jurca	149
3.1.6	Polarization – James T. Luxon	96	4.5.6	Beam Profilers – John F. Ready, Karthnik Nagarathnam and Jyoti Mazumder	149
3.2	Beam Delivery Before Focusing	96	4.6	Components for Motion Systems – John F. Ready	151
3.2.0	Introduction	96	4.6.1	Basic Considerations	151
3.2.1	Conventional Beam Delivery – Daniel A. Bakken	96	4.6.2	Guiding Methods	151
3.2.2	Fiber Optic Beam Delivery: Diode Lasers – Chandrasekhar Roychoudhuri	98	4.6.3	Drive Units	152
3.2.3	Fiber Optic Beam Delivery: Nd:YAG Lasers – Daniel A. Bakken	101	4.7	Controllers – David B. Veverka	153
3.2.4	Robotic Applications – Daniel A. Bakken	102	4.7.1	Laser and Motion Control	153
3.3	Focusing and Depth of Focus	104	4.7.2	Laser System Control	153
3.3.1	Focusing – John F. Ready	104	4.7.3	Programming	154
3.3.2	Depth of Focus – William P. Latham and Aravinda Kar	105	4.7.4	CAD/CAM and Off-Line Programming	154
3.4	Mode Quality – William P. Latham and Aravinda Kar	106	4.8	Process Gas Nozzles	155
			4.8.0	Introduction	155
			4.8.1	Nozzle Configurations – Gary S. Settles	155
			4.8.2	Nozzle Selection – D. W. Moon	156
			4.8.3	Process Gas Nozzles for Cutting – Jim Fieret	157
Chapter 4	Components for Laser Materials Processing Systems	109	4.9	Process Monitoring Systems	159
4.0	Introduction	109	4.9.1	Optical Penetration Sensing – W. W. Duley	159
4.1	Components for Beam Delivery Systems – Marius Jurca	109	4.9.2	Optical Plasma Intensity Monitoring – W. W. Duley	160
4.1.1	General Remarks on Beam Delivery Systems and Design Criteria	109	4.9.3	Acoustic Sensing – W. W. Duley	161
4.1.2	Components for Beam Delivery	110	4.9.4	Neural Networks – W. W. Duley	161
4.1.3	Adjustment/Alignment of Beam Delivery Systems	114	4.9.5	Seam Tracking Basic Considerations – W. W. Duley Evaluation of Seam Tracking Methods – Marius Jurca	162
4.2	Focusing optics	116	4.9.6	Measurement of Keyhole Depth – Marius Jurca	165
4.2.0	Introduction	116	4.9.7	Infrared Monitoring – John F. Ready	166
4.2.1	Lenses – Daniel L. Sherman	116			
4.2.2	Mirrors – Daniel L. Sherman	122	Chapter 5	Laser–Material Interactions	167
4.2.3	Diffraction Optics – Daniel L. Sherman	125	5.0	Introduction	167
4.2.4	Focusing Head and Integrated Actuators – Marius Jurca	125	5.1	Materials Characteristics – Rolf E. Hummel	167
4.3	Other Optical Components – Walter J. Spawr	128	5.1.1	Optical Properties	167
4.3.1	Beam Shaping Optics	128	5.1.2	Thermal Properties	171
4.3.2	Scanners	130	5.2	Laser Characteristics	173
4.3.3	Beam Splitters	132	5.2.1	Important Laser Properties – E. A. Metzbowser	173
4.3.4	Polarizers	133	5.2.2	Pulsed versus CW Characteristics – E. A. Metzbowser	174
4.3.5	Isolators	133	5.2.3	Focusing Characteristics – E. A. Metzbowser	174
4.3.6	IR and UV Transmitting Materials	134	5.2.4	Irradiance – E. A. Metzbowser	174
4.4	Photodetectors	139	5.2.5	Important Lasers for Materials Processing Applications – John F. Ready	174
4.4.1	Basics of Photodetectors – John F. Ready	139			
4.4.2	Commonly Used Detectors – Marius Jurca	144			
4.5	Beam Monitoring and Measurement	144			
4.5.1	Beam Samplers – Francis Audet	144			
4.5.2	Energy Meters – Francis Audet	146			

Table of Contents

Contributing Authors	XV	2.3 Other Solid State Lasers – Stephen A. Payne	44
Acknowledgements	XXI	2.4 Excimer Lasers – James Higgins	47
Foreword	XXII	2.4.1 Basic Principles – James Higgins	47
Preface	XXIII	2.4.2 Wavelengths – James Higgins	48
		2.4.3 Resonator Configurations – James Higgins	48
		2.4.4 Optical Configurations – James Higgins	49
		2.4.5 Power Sources – James Higgins	49
		2.4.6 Lifetime, Care and Maintenance – James Higgins	49
		2.4.7 Gas for Excimer Lasers – Joachim Berkmanns	50
Chapter 1 Overview of Laser Materials Processing	1	2.5 Other Lasers	52
1.0 Introduction	1	2.5.0 Introduction – John F. Ready	52
1.1 Laser Parameters – Paul Kelley	1	2.5.1 CO Lasers – Tomoo Fujioka	52
1.1.1 Laser Beam Parameters	1	2.5.2 Metal Vapor Lasers – Richard Slagle	53
1.1.2 Polarization	3	2.5.3 Ion Lasers – Kurt G. Klavuhn	55
1.2 Absorption of Laser Energy – John F. Ready	4	2.5.4 Diode Lasers	60
1.2.1 Reflection	4	Introduction to Diode Lasers – Bodo Ehlers	60
1.2.2 Absorption	5	High-Power Diode Lasers for Materials Processing – Richard W. Solarz	64
1.2.3 Focusing of Laser Light	5	2.5.5 Iodine Lasers	66
1.2.4 Laser Damage	7	The Chemical Oxygen Iodine Laser (COIL) – William P. Latham and Aravinda Kar	66
1.3 Laser Configurations – John J. Zayhowski	9	Photolytic Iodine Lasers – Philip R. Cunningham and L. A. (Vern) Schlie	67
1.3.1 Modal Characteristics – John J. Zayhowski	9	2.5.6 Nonlinear Optical Effects in Crystals – Ratan S. Adhav	69
1.3.2 Temporal Behavior – John J. Zayhowski	11	2.5.7 Free-Electron Lasers – John F. Ready	78
1.3.3 Survey of Active Media – John J. Zayhowski	13	2.5.8 X-Ray Lasers – Pierre Jaegle	78
1.3.4 Commercial Lasers for Materials Processing – M. J. Weber	16	2.5.9 Ultrafast Lasers for Materials Processing – M. D. Perry, B. C. Stuart, P. S. Banks, M. D. Feit and J. A. Sefcik	82
1.4 Laser Systems	17	2.6 Water Chiller Considerations for Laser-Cooling Applications – Terry L. Armbruster	83
1.4.0 Introduction – David A. Belforte	17	2.6.0 Introduction	83
1.4.1 Subsystems – David A. Belforte	17	2.6.1 Capacity of Cooling System	83
1.4.2 Illustrations of Complete Materials Processing Systems – David A. Belforte	19	2.6.2 Power Requirements	83
1.4.3 Illustrations of Time- and Energy-Sharing Systems – Richard J. Coyle and Ronald M. Gagosz	23	2.6.3 Chiller System Components	84
		2.6.4 Water Issues	89
Chapter 2 Lasers for Materials Processing	27	Chapter 3 Optics and Optical Systems	91
2.0 Introduction – John F. Ready	27	3.0 Introduction	91
2.1 Carbon Dioxide Lasers	27	3.1 Properties of Laser Beams	
2.1.1 Basic Principles – Jack Davis	27	3.1.1 Monochromaticity – William P. Latham and Aravinda Kar	91
2.1.2 Laser Configurations – Jack Davis	28	3.1.2 Directionality – William P. Latham and Aravinda Kar	91
2.1.3 Optics – Jack Davis	32	3.1.3 Coherence – William P. Latham	
2.1.4 Power Sources, Accessories and Controls – Jack Davis	34		
2.1.5 Lifetime, Care and Maintenance – Jack Davis	34		
2.1.6 Laser Gases for CO ₂ Laser Resonators – Joachim Berkmanns	35		
2.2 Nd:YAG Lasers – Thomas R. Kugler	37		
2.2.1 Basic Principles	37		
2.2.2 Laser Configurations	38		
2.2.3 Pump Sources	41		
2.2.4 Power Control	42		
2.2.5 Lifetime, Care and Maintenance	42		
2.2.6 Output Beam Quality	42
